

AFTER 158 YEARS, YOU CAN CALL US SUSTAINABLE

IN THE VINEYARDS

- We've been farming our land since 1858
- We tend all our vines sustainably, using organic compounds and practices whenever possible
- Encourage beneficial predators using owl boxes and insects to minimize pesticide and herbicide use
- Certified Fish Friendly Farming since 2012
- To minimize water irrigation, we use advanced, soil-based water measurement tools and sensors to determine evaporation and penetration levels

IN THE WINERY

- Installed in 2008, our solar system provides 60% of winery power and 100% of water recycling
- We have the Green Business certification from Sonoma County
- We recycle all winery waste water and, by using settling ponds and man-made wetlands, we reclaim 70% of the water used at the winery
- 60% of winery and 100% of water recycling is solar-powered
- We recycle all reusable inorganic matter
- We compost all organic winery waste and return it to the vineyards
